Comparative Effectiveness Research and the AHRQ Effective Health Care Program

Jake Yarbrough

August 29, 2013
Agenda

- AHRQ and the Effective Health Care Program
- Comparative-effectiveness research and pharmacy
- AHRQ Effective Health Care Program National Partnership Network
- Telehealth - AHRQ: Shared Benefit
Agency for Healthcare Research and Quality (AHRQ)

- **Mission:** To improve the quality, safety, efficiency, and effectiveness of health care for all Americans
- AHRQ supports research that helps people make more informed decisions and improves the quality of health care services
- Research: ~80 percent of AHRQ's budget is invested in grants and contracts focused on improving health care
The AHRQ Effective Health Care Program (EHC)

- Provides current, unbiased evidence on clinical effectiveness of health care interventions
- Focuses on patient-centered outcomes
- Helps consumers, providers, and policy-makers make informed choices
- Does not make treatment recommendations
- Long-term goal: Improve health care quality and patient health outcomes through informed decision making by patients, providers and policymakers

www.effectivehealthcare.ahrq.gov
What is Comparative Effectiveness Research (CER)?

- Comparative effectiveness research — a type of patient-centered outcomes research — compares drugs, medical devices, tests, surgeries, or ways to deliver health care, so that patients and their families can make more informed choices.

- Findings are descriptive, not prescriptive, and are intended as tools for informed decision making, not recommendations.

- Findings highlight current evidence about effectiveness, risks, and side effects.
Priority Conditions for the EHC Program

- Arthritis and non-traumatic joint disorders
- Cancer
- Cardiovascular disease, including stroke and hypertension
- Dementia, including Alzheimer Disease
- Depression and other mental health disorders
- Developmental delays, ADHD, and autism
- Diabetes Mellitus
- Functional limitations and disability
- Infectious diseases including HIV/AIDS
- Obesity
- Peptic ulcer disease and dyspepsia
- Pregnancy including pre-term birth
- Pulmonary disease/Asthma
- Substance abuse
Effective Health Care Program Products

- Clinician Summaries
- Web Site
- Mobile
- Consumer Summaries
- Reports, Research & Other Initiatives
- Patient Decision Aids
- CME Modules & Case Presentations / CE Activities*
- Faculty Slides
- Conference Series

Products developed for the Effective Health Care Program by the John M. Eisenberg Center for Clinical Decisions and Communications Science at Baylor College of Medicine, Houston, Texas

* CE activities developed and provided by entities external to the Eisenberg Center.
AHRQ research shows that patients most want to receive information about their treatment options directly from their healthcare professional.

Comparative effectiveness research is valuable because it reviews alternative treatment options and presents them in an unbiased manner.

When both clinicians and consumers know and discuss the options, the result is often better care.
AHRQ Products To Support the Work of Healthcare

- Research Summaries for clinicians
- Research Summaries for consumers
Comparing Medications for Adults With Type 2 Diabetes

Focus of Research for Clinicians

A systematic review of 166 clinical studies published between January 1966 and April 2010 examined the comparative effectiveness, benefits, and adverse events of available monotherapy and two-drug combinations of medications for adults with type 2 diabetes. The review did not cover treatments of type 1 diabetes or gestational diabetes nor does it review evidence regarding the effectiveness of diet, exercise, and weight loss. The full report, listing all studies, is available at http://www.effectivehealthcare.ahrq.gov/diabetes.htm.

Background Information

The management of hyperglycemia is an important focus of treatment to achieve improved macrovascular and microvascular outcomes in patients with type 2 diabetes. Existing blood-glucose levels often require several strategies, including weight loss if needed, dietary control, increased physical activity, and antidiabetic medications.

Treatment regimens include single drugs and combinations of drugs from different classes. Choosing among the available medications requires consideration of benefits, adverse effects, mechanism of action, and cost. In 2007, the Agency for Healthcare Research and Quality published its first systematic review on the comparative effectiveness of oral medications for type 2 diabetes. The 2011 update includes newer medications and two-drug combinations.

Conclusion

Evidence on the comparative effectiveness of antidiabetic medications for long-term macrovascular and microvascular outcomes is limited. However, evidence is available on intermediate outcomes. Many antidiabetic medications given as monotherapy work equally well to lower blood glucose. Two-drug combinations decrease hemoglobin A1c (HbA1c) further. Most agents (except metformin [M1]) and glucagon-like peptide 1 (GLP-1) receptor agonists and insulin) are associated with increases in weight. The risk of mild to moderate hyperglycemia varies — it is highest for second-generation sulfonylureas (SU) and is increased for some two-drug combinations over monotherapy. M1 may cause gastrointestinal (GI) upset. Use of sulfonylureas and GLP-1 receptor agonists is associated with increased risk for cardiovascular, cardiovascular events, hip and nonsite fractures, and other risks in some patients. Tables 1, 2, and 3 summarize evidence about benefits, adverse events, and long-term benefits.

Gaps in Knowledge

- **Benefits/Adverse Events**
  - Strength of Evidence: High
  - or moderate: few good-quality studies, large sample size, strong dose-response curves, evidence from survival studies, or randomized controlled trials (RCTs)
  - Moderate: or low: moderate or low evidence, poor or conflicting dose-response curves, evidence from survival studies, or RCTs
  - Low: or very low: studies, or studies stopped prematurely
  - Insufficient: Evidence is unavailable or does not permit estimation or use of effect.
# Reviewing the Clinician Summary

## Average Wholesale Prices for Diabetes Medicines (Continued from previous page)

</table>

These prices are the Federal median price for generic medicines and the average wholesale price for brand name medicines rounded to the nearest $5. These prices come from Red Book, Pharmacy's Fundamental Reference, 2011 Edition.

## What To Discuss With Your Patients

- Establishing a goal for HbA1c and strategies to help patients meet that goal, including weight loss, exercise, and consistent use of medication.
- Strategies to increase adherence, including creating a medication schedule, addressing the costs of medications, and reporting adverse effects in a timely manner.
- The need for regular glucose testing and routine blood tests for HbA1c.
- What side effects to expect from the chosen medicines, and when to contact you if side effects occur.

## Resource for Patients

*Medscape: Medications for Type 2 Diabetes, A Review of the Research for Adults* is a companion to the clinician research summary. It can help people talk to their health care providers about medications for type 2 diabetes. It provides information about:

- Types of diabetes medications.
- The benefits and risks of medications.
- Costs of medications.

## Ordering Information

For electronic copies of *Medications for Type 2 Diabetes: A Review of the Research for Adults*, this clinician research summary, and the full systematic review, visit www.effectivehealthcare.ahrq.gov/reviewmed. To order free print copies, call the AHRQ Publications Clearinghouse at 800-382-4966.

## Source

The information in this summary is based on *Oral Diabetes Medications for Adults With Type 2 Diabetes: An Update, Comparative Effectiveness Review No. 27*, prepared by the Johns Hopkins University Evidence-based Practice Center under Contract No. 290-02-0018 for the Agency for Healthcare Research and Quality, March 2011. AHRQ Publication No. 11-EHC068-EF; Available at www.effectivehealthcare.ahrq.gov/cebrmed. This summary was prepared by the Harvey Eieran Center for Clinical Decisions and Communications, School of Public Policy, University of Michigan, Ann Arbor, MI.
Consumer Summaries

- Most clinician summaries have an accompanying consumer piece
  - Supports conversation between patients and healthcare providers
  - Helps lead to shared decisions about the best treatment

- Summaries are available in multiple formats

- English and Spanish
Overview

Is This Information Right for Me?

Yes, if:
- Your doctor or health care provider has told you that you have type 2 diabetes and have high blood sugar.
- Your doctor or health care provider recommends that you take medicine to help lower or control your blood sugar.

No, if:
- You are younger than 18 years old.
- You have a different kind of diabetes called type 1 diabetes.
- You are pregnant and have a different kind of diabetes called gestational diabetes.

What is covered in this research summary?
This summary covers the research on the benefits and possible side effects of medicines to lower or control your blood sugar. It will help you talk with your doctor or other health care professional to decide which medicines are best for you.

Where does the information come from?
The information in this summary comes from a review of many studies about type 2 diabetes medicines. The review was conducted by an independent research center in 2007 and again in 2011. Read the full report at www.effectivehealthcare.ahrq.gov/diabetesmeds.cfm.

Understanding Your Condition

What is type 2 diabetes?
- Insulin is a hormone, or chemical, made by the body. It is needed to change food into energy.
- Type 2 diabetes means that your body cannot make enough insulin or that the cells in your body do not use insulin well. This causes blood sugar to get too high.

Why treat type 2 diabetes?
- If your blood sugar level stays high for a long time, you may have a greater chance of a heart attack, a stroke, kidney damage, or blindness. You may also need to have a toe, foot, or leg removed because of poor blood flow.
- Keeping your blood sugar at a good level might lower your chance of having these problems.

How is type 2 diabetes treated?
- The first step in controlling your blood sugar is to eat a balanced diet and be more active. Even small changes in exercise can make a big difference.
- Many people also need medicine to help keep their blood sugar under control.
OVERVIEW

How do I know the amount of sugar in my blood?

There are two common tests for blood sugar. They can help you and your doctor check how well your blood sugar is under control.

**Finger stick**
One test is a finger (or forearm) stick that you can do yourself. This test is done one or more times a day. You can do it in the morning before you eat (fasting) or at other times of the day, like after a meal. This test tells what your blood sugar level is at that moment in time. The fasting number should be between 80 and 150. After a meal, the target is usually less than 180.

**Blood test**
The other test is a blood test called hemoglobin (HbA1C). This test is done at your doctor’s office or at a lab a few times a year. The A1C test shows your average blood sugar level over the past 2 to 3 months. Usually the goal is for your A1C to be around 7. This means that your finger-stick blood sugar level has been in the “good” range over the past 2 to 3 months. If the A1C level is higher than this, changing your medicine might help.

Understanding Your Options

**Are all diabetes medicines the same?**
There are many types of diabetes medicines. Each type works in a different way to control blood sugar.

**How well can medicines lower my blood sugar?**
All the medicines in this summary lower blood sugar. The lab test for blood sugar level (A1C) is the best way to tell how well the medicines work.

- Most diabetes medicines can lower your A1C by about 1 point. This means that if you start with an A1C level of 8, taking one of these medicines could bring it down to 7.
- Combining two kinds of diabetes medicines can lower blood sugar more than taking just one kind. Most combinations of medicines can bring it down about 1 extra point. This means if you start with an A1C level of 9 and can bring it down to 8 with one kind of medicine, you might be able to lower it to 7 by adding a second medicine.
- There is not as much research on some drugs: nateglinide (Starlix®), exenatide (Byetta®), and sitagliptin (Januvia®). This means that we do not know as much about how these drugs compare with other diabetes medicines.
IMPORTANT QUESTIONS

How often will I need to take these medicines?
- Some diabetes medicines are taken once a day. Others need to be taken more often or with meals.
- No matter which medicines you need, follow the directions for each of them.
- Keep taking your medicines until your doctor tells you to stop. Not taking the medicines, or only taking them for a short time, will NOT help you lower or control your blood sugar.
- Check your blood sugar every day with your glucose monitor, and get your A1C blood tests when your doctor schedules them.

Where can I get more information about type 2 diabetes?
For more information about diabetes, visit the Medline Plus Website: www.nlm.nih.gov/medlineplus/diabetes.html.

Ask Your Doctor
Talk with your doctor or health care provider about the information in this research summary.
1. Why are you choosing this diabetes medicine instead of the other medicines?
2. Will this medicine make me feel bad, gain weight, feel different, or cause changes to my body?
3. What is my current A1C number, and what would you like it to be?
4. How often should I check my blood sugar and at what times?
5. How will this medicine affect my daily activities, like working, sleeping, or taking care of my family?

New AHRQ Initiative - For Health Care Professionals and Consumers

- **Promotes** new free resources for health care professionals and consumers to keep momentum growing for evidence-based health resources
- **Invites** national and regional partners to join in the effort to empower consumers with and inform health care professionals about reliable tools to make informed health care decisions
Visit and promote the initiative’s Web page for employees: www.ahrq.gov/treatmentoptions
- Promotional videos to help newly diagnosed and existing patients, as well as their caregivers
- Text messaging program: text COMPARE to 22764 to get the latest health updates

Share free resources and tools
- Treatment Options Facebook pages
  - In English: www.facebook.com/yourtreatmentoptions
  - En español: www.facebook.com/AHRQehc.espanol
- Patient brochures (in English and Spanish) and public service announcements to help compare treatment options; fact sheets with ideas for how to get involved and a comprehensive list of resources
- Online and digital tools to share with others
For Consumers: AHRQ Treatment Options: http://www.ahrq.gov/treatmentoptions

Everyone can benefit from the facts.

Explore treatment options. Compare benefits and risks. Prepare for your medical appointments. Get clear, unbiased information about treatments for common health conditions. Watch the videos below.
For Clinicians: AHRQ Treatment Options: Get the Clinical Bottom Line.

- **Visit and promote** the initiative’s Web page for health care professionals: www.ahrq.gov/clinicalbottomline
- Access the clinician treatment summaries, as well as companion summaries for patients and caregivers

- **Share** free resources and tools
  - Patient brochures (in English and Spanish) and public service announcements to help compare treatment options; fact sheets about the initiative and how to get involved; comprehensive publication list
  - Online and digital tools to share with others
For Clinicians: AHRQ Treatment Options: Http://www.ahrq.gov/clinicalbottomline

Get the clinical bottom line.

Home  For Your Patients

Every minute with your patients counts. Maximize your time and effectiveness with reliable tools from AHRQ that support evidence-based medicine.

Evidence-Based Resources

AHRQ’s Effective Health Care (EHC) Program provides free research summaries that support clinicians in the practice of evidence-based medicine. The summaries are concise, unbiased, and practical, providing reliable comparisons on the benefits and risks of treatments for many
Comparative effectiveness research is relevant to all stakeholders in health care:
- Physicians, pharmacists, health care provider organizations, pharmaceutical manufacturers, employers, insurers, government agencies

Clinical teams can keep abreast of the latest studies regarding best clinical practices by using the clinician guides, continuing education modules, and other resources.
Application Examples

- **American Nurses Association** has incorporated evidence-based information from AHRQ's EHC Program into a toolkit that members are using in both academic and practice research.

- **Maryland Department of Health and Mental Hygiene** used materials created by AHRQ's EHC Program to help set up a new program for appropriate use of antipsychotic medications in children.

- **IBM Integrated Health Services** incorporated AHRQ’s EHC consumer summaries and US PSTF recommendations into their annual online annual Health Risk Assessment and Preventive Care Rebate Program.

- **Case Studies link** - http://www.ahrq.gov/policymakers/measurement/case-studies/index.html
The National Partnership Network

What is the partnership network?
- Organizations across the US supporting CER
- Help create awareness of CER and resources in patient and professional communities
- Committed to improving quality of health through informed decisionmaking

What types of organizations are partners?
- Professional associations
- Healthcare providers/clinicians
- Patient-focused organizations
- Priority populations
The National Partnership Network

Why become a partner?

- Opportunities to connect with groundbreaking, comprehensive efforts to improve CER
- Recognition as a partner in AHRQ’s Effective Health Care Program partnership materials
- Free evidence-based resources and tools for your stakeholders
- Access to AHRQ Effective Health Care Program updates with the latest research news
The Dissemination Framework

Effective Health Care Program
research and translated products

National Initiative
National awareness of CER and specific findings

Regional Offices
Deeper awareness of CER and findings at regional, local, or system level

Academic Detailing & Online CE
Individual clinician education and practice-level implementation

Evaluation
Purpose: Enhance awareness, understanding, and use of CER and EHC Program products in health care decisionmaking at the regional, State, and local levels

Focus: The most prevalent health disparities in each region (diabetes, heart conditions, mental health, cancer)

Strategy: Targeted Partnerships
- Create collaborative, ongoing, and robust dissemination partnerships
- Outreach to local and regional health care organizations, businesses, unions, consumer, and other organizations
- Target audiences: clinicians, patients, and the influencers who reach them
Number of Partnerships by State

Regional Partnership Development Offices - Total Number of Pledged Partners

Total Pledged Partners: 478
Telehealth - AHRQ: Shared Benefits of Partnership

- **Share** resources with your stakeholders
  - Use slides, summaries and other materials; make continuing education modules available
  - Create customized or co-branded materials based on Effective Health Care Program content
  - Feature the Effective Health Care Program and existing and new products on organization’s Web site, social media channels, or newsletters

- **Contribute** to research process
  - Shape future research by participating in Community Forum activities

- **Collaborate** with our regional partnership network
Accessing Free Resources

- To access resources and products online, go to www.effectivehealthcare.ahrq.gov

- To order FREE printed copies (including bulk quantities) of EHC Program reports and summaries, call the AHRQ Publications Clearinghouse at 1-800-358-9295 or email ahrqpubs@ahrq.hhs.gov with the titles (or publication numbers) and quantities you want to order.
